Protect the mission of your
long-term care facility

Smart solutions for quality of care, quality of life, and more.

AXIS®
COMMUNICATIONS

Protect what matters

The mission of long-term care facilities is to ensure individuals are safe and have what they need to thrive. An Axis network solution makes it easier for your facility to deliver on that promise.

An environment to thrive in

Axis end-to-end solutions combine intelligent analytics with network video, audio, access control, other devices, and intuitive management software to support outstanding care and safe, secure environments. They're also flexible enough to enable the right mix of independence and support for different types of facilities, as well as individual residents.

And an excellent place to work

Staff in long-term facilities balance a complex load: residents' physical health and safety needs, as well as their cognitive, mental, and social health needs. And then there are all the operational tasks needed to keep things running smoothly. Our solutions let you streamline workflows, automate some tasks, and manage other tasks remotely. As a result, your staff has a more manageable workload, and more time to invest where it matters most.

Why choose Axis end-to-end?

We build on an open platform, so you're always free to integrate our cameras, speakers, and other devices with third-party systems. But, for many facilities, choosing a single supplier is more cost-effective and easier to manage.

Axis is the market leader in network solutions. Our extensive portfolio offers a wide range of IP-based devices to suit almost any environment. All of them are NDAA-compliant, perfectly matched to each other, and ready to go out of the box. They also support analytics on the edge and come with several analytics preinstalled. AXIS Camera Station Pro lets you manage the entire system from a single intuitive interface. In addition, every Axis product is designed to make cybersecurity easier for you, and to enable you to remain HIPAA-compliant. Finally, if you need technical support, you'll only ever need to call one number to get world-class assistance.

What we offer

We help enable:

A high quality of care

Remote monitoring capabilities, real-time alerts, and two-way audio support more intelligent and efficient workflows, helping staff be everywhere they're needed.

A high quality of life

Our flexible solutions are easily customized, so you can balance each resident's unique needs for privacy, independence, and support.

Safer, smarter environments

Network solutions help safeguard residents, staff, and visitors by deterring incidents, ensuring real-time awareness, and enabling fast responses to the unexpected.

Sample use cases

1. Manage visitor, resident, and staff access to and within the facility
2. Detect falls and alert staff to high-risk resident movement
3. Deter unwanted behaviors and document resident-staff interactions
4. Facilitate virtual visitation with loved ones
5. Communicate easily with two-way audio and video
6. Deter theft and drug diversion
7. Coordinate announcements, alerts, and background music
8. Automate vehicle access control for secure parking
9. Prevent resident elopement
10. Prevent overexposure and missed medical distress

Up close:
Quality of care

Even when you face staffing challenges, Axis solutions help you consistently meet residents' needs by optimizing workflows and reducing unnecessary tasks. The result? More time for high-quality interactions, and improved well-being for residents and personnel.

Streamlined communication

In-room network intercoms make it easy for residents to communicate with staff without waiting for a visit. Remote check-ins can also minimize infection exposure when needed.
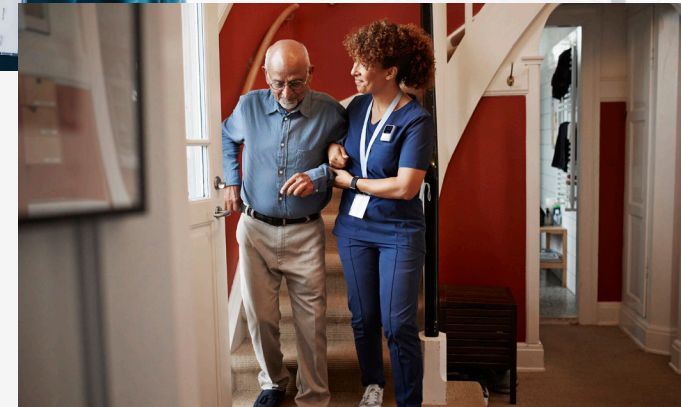

Fast responses

Network audio and video devices equipped with intelligent analytics provide an immediate alert when residents need help – for example, in the case of excessive coughing or unusually high noise levels, falls, elopement, or overexposure risk in outdoor areas. When seconds matter, network strobe sirens, color-coded for specific emergencies, notify staff throughout the facility.

Intelligent prioritization

Network solutions make it possible for one staff member to continuously monitor multiple high-need residents from a central location, so staff can dismiss nuisance alarms and prioritize tasks based on real-time needs.

Greater transparency

Wearable cameras and in-room solutions also enable you to document staff-resident interactions, ensure procedures are followed, and review retraining needs to ensure a consistently high level of care.

An investment that pays off

Adverse events, from falls to elopements to missed medical distress, pose some of the greatest risks to residents and the facilities charged with caring for them. Network solutions can dramatically reduce these personal and financial risks with a proactive approach and faster response times.

Up close:
Quality of life

At Axis, we don't believe in technology for technology's sake. We believe technology should reduce daily friction and improve quality of life. Our solutions reflect that.

An easier day-to-day

Make it easy for authorized people to get where they need with license plate recognition solutions in parking areas and network video intercoms with credential readers at entrances. Inside your facility, credential readers keep rooms secure yet accessible for residents who may struggle with keys. Plus, to enable seamless access for visitors, you can send temporary mobile credentials to visitors' smartphones in advance of a visit.

Support for social connections

Secure video calls let residents connect with their loved ones. And when it comes to group events in your multipurpose room, transition seamlessly between events like movie showings, fitness classes, and educational presentations with a network volume controller that lets you manage audio source and volume without logging into software.

Solutions tailored to individuals

The flexibility of network solutions enables you to better support the best outcomes for individuals. For example:

> Configure permissions so each resident can move freely where they're authorized, and staff is aware when there's a risk of elopement.
> Connect a patient's hearing aid to their in-room intercom for easy communication with staff.
> Record event-triggered messages – for example, asking a fall-risk resident to wait for assistance – in the familiar voice of a loved one.

Plus, with remote monitoring and two-way audio, you can protect an individual resident's sense of privacy and independence by reducing unwanted and unnecessary wellness checks.

An investment that pays off

Less friction for residents, staff, and visitors increases their satisfaction, helping boost the reputation and ratings of your facility.

Safety and security

Protect your staff and the individuals in your care, as well as their property and yours.

Smart systems, safer places to live

Network solutions help you detect, deter, and document incidents in your facility. For example, wearable cameras for staff deter unwanted behavior from the wearer as well as residents and visitors, and audio analytics on in-room cameras can alert staff to aggression or unusually high noise levels. And for families who can't always be there, a secure connection to a resident's in-room camera provides peace of mind about the quality of care. Meanwhile, in facilities where residents are largely independent, AXIS Camera Station Pro lets staff remotely check door status and history to evaluate the need for a wellness check.

Secure environments

From parking lots to residences to medication storage cabinets, network cameras and access control help prevent unauthorized access, deter theft and drug diversion, and make it easier to invesitgate incidents that do happen.

Dependable alerts

No matter how proactive you are, the unexpected can happen. Network strobe sirens and public address systems help get alerts and live or prerecorded instructions out quickly when every moment matters – for example, to support your emergency notifcation system in the event of a fire, earthquake, or lockdown.

An investment that pays off

With an Axis solution helping you detect and deter unwanted or illegal behaviors, you can better protect people and property. Meanwhile, documenting resident/staff interactions ensures you can quickly dismiss wrongful claims.

At the heart of your solution

The technical: AXIS Camera Station Pro

AXIS Camera Station Pro is an intuitive VMS that lets you do more than manage your cameras and control building access. It's easy to add features like network speakers and intercoms to communicate with staff and residents, wearable camera solutions to document resident/staff interactions, strobe sirens that provide audible and visible urgent alerts, and AI-based analytics for real-time alerts to falls, shouting, elopement risks, and other time-sensitive issues. Plus, we upgrade AXIS Camera Station Pro all the time, helping you better protect your residents and streamline your workflows.

The personal: privacy and dignity

Privacy needs differ around the world, and from one individual from the next. To help you meet those needs, our solutions – including our partner integrations – are flexible and customizable. For example, we offer AXIS Live Privacy Shield, an AI-based masking application that lets you mask elements in a video feed such as faces, other parts of the body, or specific areas within a room. Additionally, AXIS Camera Station Pro allows you to redact identifying features or areas of the scene in recorded footage if you need to share footage during an incident investigation.

You can also set privacy at the device level – for example, turn off the microphone on a two-way speaker or audio-equipped camera, or choose thermal cameras to monitor for falls without capturing identifying features.

Finally, because you control access to all recordings, compliance with HIPAA or other legislation is straightforward: ensure secure storage, properly configure permissions, and set and communicate rules for viewing or sharing recordings.
