

AXIS Forensic Search for Genetec

Axis devices accelerate forensic search in Genetec

AXIS Forensic Search for Genetec accelerates forensic investigations by enabling efficient search, recovery, and sharing of video evidence. It uses motion object tracking, object classification, and object attribute metadata to enable accurate identification without the need for any analytics servers. This means you can search for specific classes, attributes, motion, or objects in an area of the scene. Seamlessly integrated with Genetec, search results can be easily extracted, managed, and shared as video evidence. It's also integrated with Genetec's data visualization which helps improve response and analysis times.
