

Software release 2.40

Software release 2.40 is intended for the AXIS 7000 Network Document Servers with part no: 0094-xxx-02 or 0094-xxx-03. The software is available free of charge on the Axis web site. All features of the previous software 2.30 are retained.

The main highlights are:

Support for additional scanning devices

- Hewlett Packard
 - HP7400C (A4, flatbed, b/w, grayscale and color)
 - HP7450C (A4, flatbed, ADF, b/w, grayscale and color)
 - HP7490C (A4, flatbed, ADF, b/w, grayscale and color)

E-mail enhancement

- SMTP authentication has been added. It is now possible for the AXIS 7000 to log on to an SMTP server when sending mail for additional security. The administrator can select whether to use a fixed account or use the user name and password when logged on against an LDAP or NT server.
- Carbon copy (cc) functionality has been added. A cc mail can be sent to a fixed e-mail address or if logged on, to the logged on user.
- E-mail confirmation has been added. When a document is sent by the AXIS 7000 via e-mail the sender can get a confirmation of delivery. The AXIS 7000 supports two methods. The first and safest method will return an e-mail to the sender when the receiving server has put the sent document in the recipients Inbox. The second method will request the recipient's e-mail client to confirm delivery. The e-mail confirmation feature is available when user authentication is used to further guarantee that the confirmation is sent to the correct sender. The first method is Delivery Status Notifications (DSN) and the second method is Message Disposition Notifications (MDN).

Other enhancements

- TIFF rotation is now available for scanners with a reversing duplex feeder:
 - Bell & Howell 730DC FB
 - Epson GT-10000+ and GT-30000
 - Gestetner SC430DC
 - Nashuatec SC430DC
 - Rex Rotary SC430DC
 - Ricoh Aficio IS330DC

The back page image will be rotated automatically and shown correctly if the used TIFF viewer supports rotation.

- More menu items e.g. profile, paper size, duplex and e-mail subject can be directly accessed with the function keys on a connected optional keyboard. See the User's Manual for details.
